Overview of the Project

- A **VR Pub Quiz Game** that combines trivia with immersive social VR environments.
- Players can choose themed quizzes, such as **FRIENDS**, with interactive and dynamic settings; or join a pub quiz hosted by a quiz master.
- Empowers both quiz participants and quiz masters by providing tools to host and engage in quizzes.

- **Domain:** Entertainment and Gaming
- **Target Users:**
 - Pub quiz enthusiasts seeking immersive trivia experiences.
 - FRIENDS fans who want to relive iconic moments through quizzes. (for this prototype)
 - Quiz masters looking for a platform to create and host quizzes.

Domain and Users

Justification of Design Choices

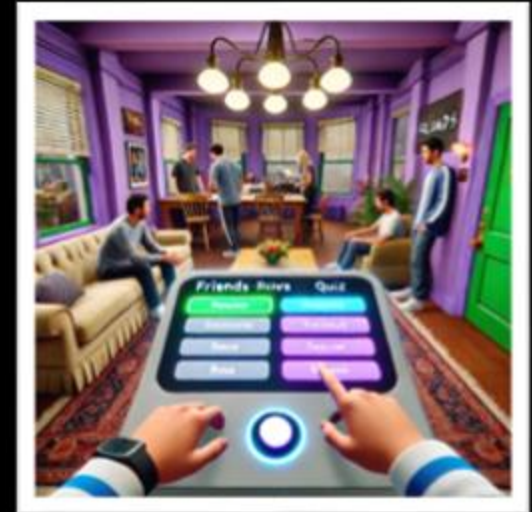

- Addresses the need for engaging, themed trivia experiences that go **beyond static online quizzes** or quizzes held on zoom **during times of social distancing**, especially for people living alone or with limited mobility.
- **Empowers quiz masters** with tools to host events without physical limitations.
- Provides players with **interactive, customizable environments** that enhance the trivia experience and social interactions.

Project Structure

Players choose a quiz theme (e.g., FRIENDS)

User transported to selected theme's environment

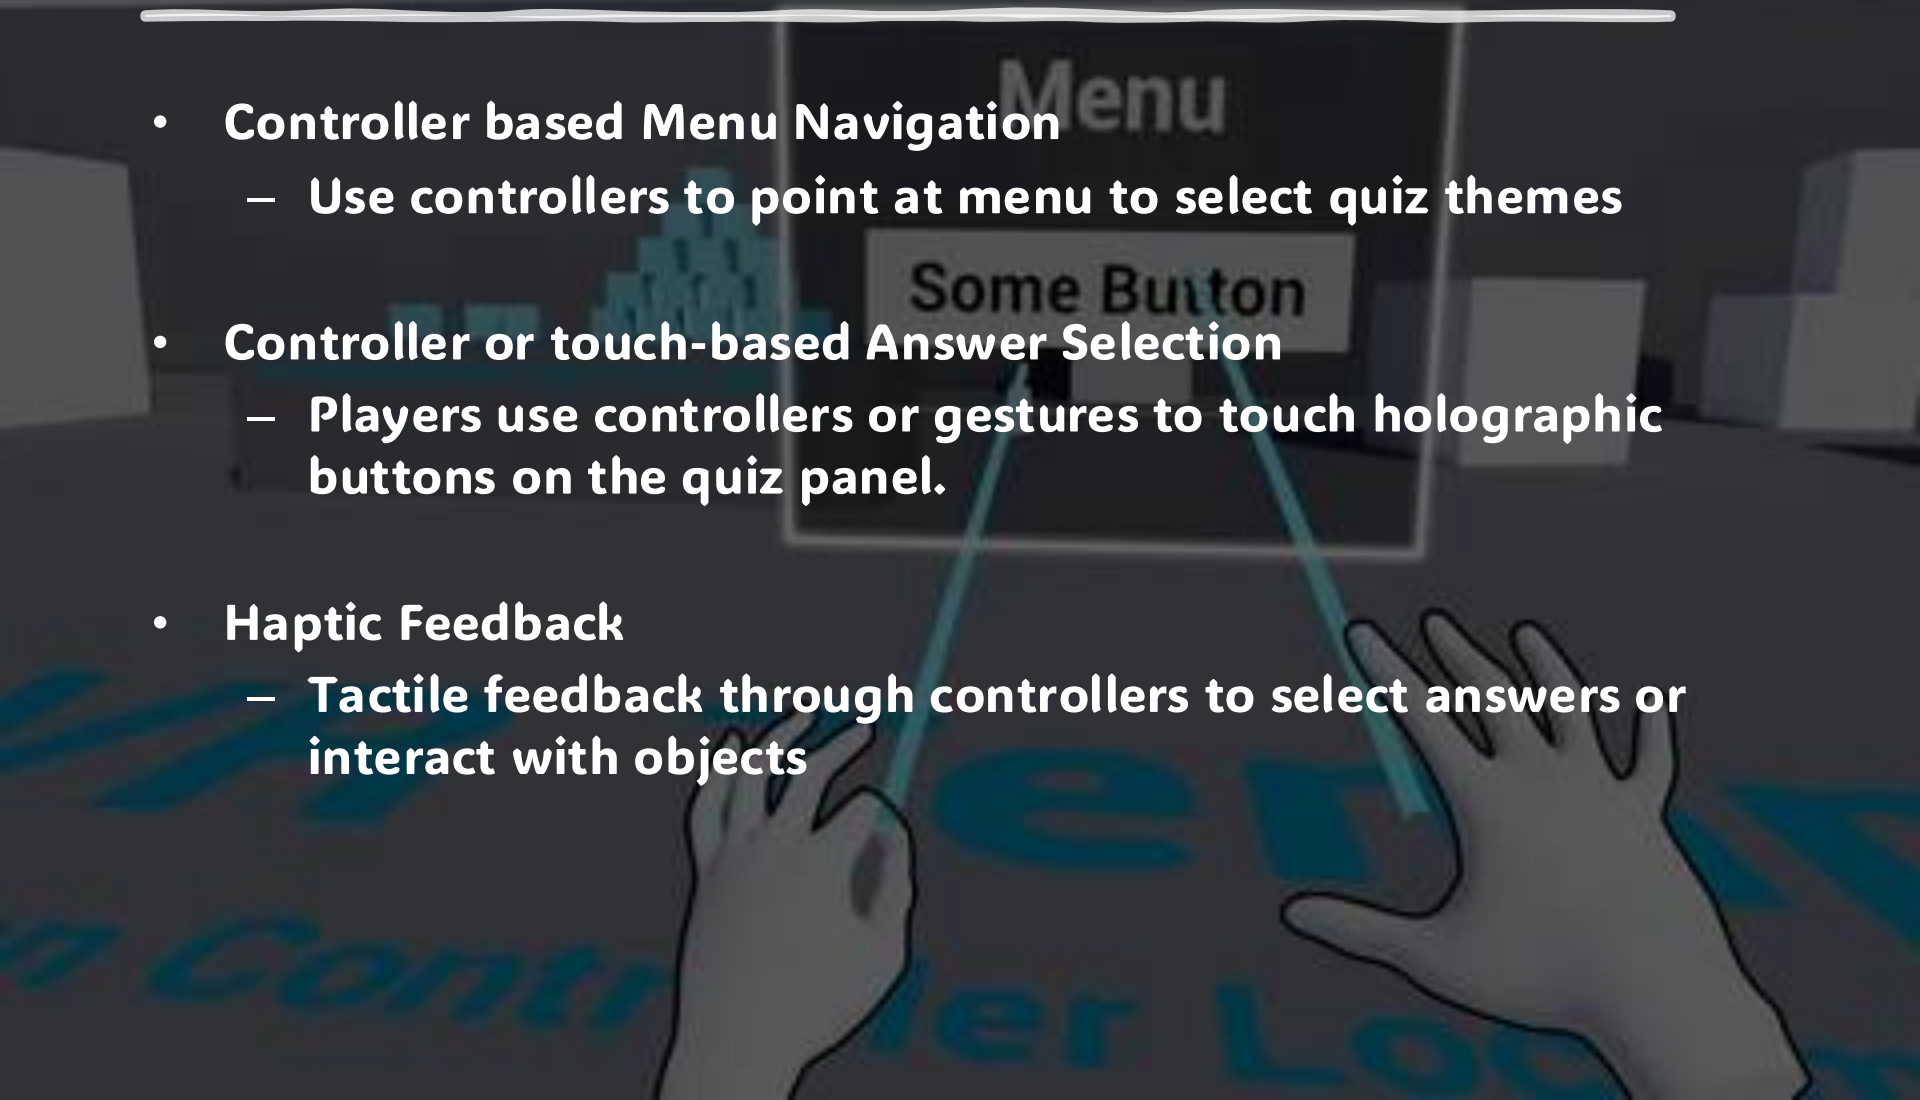

Players interact with the quiz panel to answer questions

User Flow

Tracking Laser Beam & Widge

Key Interaction Techniques

- **Controller based Menu Navigation**
 - Use controllers to point at menu to select quiz themes
- **Controller or touch-based Answer Selection**
 - Players use controllers or gestures to touch holographic buttons on the quiz panel.
- **Haptic Feedback**
 - Tactile feedback through controllers to select answers or interact with objects

Images are AI-generated.

Visual and Sound Design

Visual Style:

- Menu scene: warm, cozy pub environment
- Themed environments (e.g., Central Perk, Monica's apartment).
- Warm, nostalgic lighting and decor.
- Player can sit in a fixed position, or move around to interact with objects (i.e., beer mug, throw items)

Sound Design:

- Background music (e.g., FRIENDS theme).
- Interactive sound effects for correct/incorrect answers.
- Button and panel selection sound

Avoiding Simulator Sickness

Minimized rapid camera movements.

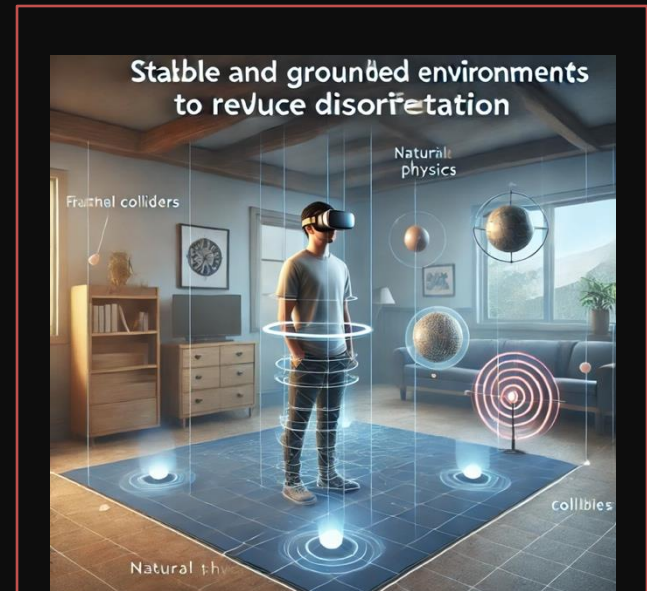

- Prevent motion sickness by ensuring camera movement is stable and aligned with player's expectations in VR.
- Fixed camera position (i.e., XR Rig)
- Smooth and gradual effects like fades for scene transitions

Stable, grounded environments with smooth transitions.

- Reduction of disorientation.
- Ground player's starting position is aligned with VR environment.
- Use Rigidbody/Colliders to ensure objects in environment respond naturally.

Options for teleportation or limited motion for player navigation.

- Use XR Interaction Toolkit Teleportation Provider to implement teleportation.
